

## Mitapivat Pediatric Clinical Trial Program

A Phase 3, Multicenter, Randomized, Double-Blind, Placebo-Controlled Study to Evaluate the Efficacy and Safety of Mitapivat in Pediatric Subjects with Pyruvate Kinase Deficiency Who Are Regularly Transfused, Followed by a 5-Year Open-Label Extension Period

## Key Eligibility Criteria

- Aged 1 to <18 years with central laboratory confirmation of pyruvate kinase (PK) deficiency (presence of ≥2 mutant alleles in the PKLR gene, of which ≥1 is a missense mutation)
- 6 to 26 transfusion episodes in the 52-week period before providing informed consent
- Have complete records of transfusion history for the 52 weeks before informed consent

BID = twice daily.

Mitapivat is a PK activator approved by the FDA for the treatment of hemolytic anemia in adults with PK deficiency. Mitapivat is not authorized for use by the EMA or any health authority outside the United States. The safety and efficacy of mitapivat in other indications are under investigation and have not been established. There is no guarantee that mitapivat will receive health authority approvals or become commercially available in any country for the uses under investigation.
